

**FS Dynamics establishes a Norwegian presence through Ranold.**

FS Dynamics has acquired Ranold AS, a Norwegian engineering consultancy specializing in advanced CFD, flow assurance, thermal processes, and multiphase systems. The acquisition establishes FS Dynamics' first presence in Norway and strengthens the group's position as a leading European partner for advanced engineering simulation.

Together, FS Dynamics and Ranold combine complementary expertise, increased capacity, and a shared engineering foundation rooted in physics-based modelling. Ranold has strong positions in oil & gas and aquaculture, and FS Dynamics adds expertise in areas such as structural analysis and nuclear applications as well as in simulations within marine, life-science, wind- and wave energy applications.

"FS Dynamics and Ranold have co-existed in the CAE consultancy market for more than two decades. Over the years we have learned that we have a strong cultural fit, and we are very happy that Ranold has chosen to join us on our journey to become the leading engineering simulation group in Europe. Together, we create a stronger and broader offering for our customers, and we see good potential for both organic growth and add-on acquisitions in Norway", says Roger Blom, Group CEO of FS Dynamics & Volupe.

"This partnership is a strong strategic fit. We share the same engineering DNA – a common language grounded in physics and advanced modelling – while serving complementary industries. Applying these principles in different contexts creates a strong platform for knowledge sharing, professional growth, and more innovative, value-adding solutions for our clients. It is also genuinely exciting to establish the first FS Dynamics presence in Norway.", adds Marit Kleven, Chair of the Board, Ranold AS

**About FS Dynamics and Ranold**

FS Dynamics is a leading provider of CAE and simulation in Europe. The company's core competence is in the industrial application of CFD and FEA. From digital prototypes and product refinement to system optimization and fault finding, we help our customers develop high-quality products and processes. FS Dynamics has 180 employees in 5 countries, from which projects and CAE software are delivered to customers in a vast range of industries worldwide. The CAE-focused group also includes Volupe, a Siemens and Altair VAR partner, providing simulation software to over 150 customers across the Nordics and Europe.

Ranold is an engineering consultancy specializing in advanced modelling and simulation of fluid flow, thermal processes, and multiphase systems, established in Norway in 2006. The company primarily serves clients within energy, oil & gas, aquaculture, and water treatment industries, delivering high-end CFD, flow assurance, and process analysis. Ranold combines deep physical understanding with state-of-the-art numerical tools to solve complex challenges and optimize system performance. The company is recognized for its pragmatic approach, delivering robust, decision-ready insights tailored to each client's needs. Ranold AS has the capability, and the ambition, to contribute to increased operational safety, minimization of risks, and increased profitability for its clients.
